1. Develop a PHP program to convert Dollar into Rupee.

```
<?php
$dollar = 10;
$rate = 83;
$rupee = $dollar * $rate;

echo "Dollar = $dollar<br>";
echo "Rupee = ■$rupee";
?>
```

```
Output:
Dollar = 10
Rupee = ■830
```

2. Develop a PHP program to test odd and even number.

```
<?php
$num = 10;

if ($num % 2 == 0)
{
    echo "$num is an Even number";
}
else
{
    echo "$num is an Odd number";
}
?>
```

```
Output:
10 is an Even number
```

3. Develop a PHP program to assign the scouts to tents based on their age.

```
<?php
$age = 15;

if ($age >= 10 && $age <= 12)
{
    echo "Scout is assigned to Tent A";
}
elseif ($age >= 13 && $age <= 15)
{
    echo "Scout is assigned to Tent B";
}
elseif ($age >= 16 && $age <= 18)
{
    echo "Scout is assigned to Tent C";
}
else
{
    echo "Scout is not eligible for any tent";
}
?>
```

```
Output:
Scout is assigned to Tent B
```

4. Develop a PHP program to calculate factorial of a number.

```php
<?php
$num = 5;
$fact = 1;

for ($i = 1; $i <= $num; $i++)
{
    $fact = $fact * $i;
}

echo "Number = $num<br>";
echo "Factorial = $fact";
?>
```

```
Output:
Number = 5
Factorial = 120
```
